CS 360
Programming Languages
Day 23

Review

- Grammar
- Parsing and Parse Trees
- Lexing / Tokenizing

Detour: Domain-Specific Languages

- What is a “**domain**”?
- What are some examples of well-defined domains?
- What are some examples of ill-defined domains?

Detour: Programming Paradigms

- **Declarative Programming:** the code specifies *what* should happen
  - Includes **functional programming** and should be a goal of your own DSL

- **Imperative Programming:** the code specifies *how* to do things
  - Includes **object-oriented programming** and most programming you have learned so far

Final Project

- Specifications

- Repo structure

- To Do:
  - Read the specifications
  - Spend a few minutes brainstorming on your own: use the internet, notes, AI, whatever
  - Share your thoughts!

Team Formation

- Form a group of 2-3 people who want something similar
- **First:** schedule your proposal submission during my office hours
- **Then:** schedule a time to work on / finish your proposal!
- **Finally:** work on your proposal for the rest of class
